ITP 303 Project Proposal

Topic

The website will: 1. Store recommendations and 2. Retrieve stored recommendations when user can't make up mind about what to eat or what to watch, etc. Kind of like a master bucket list of sorts that includes every recommendation made, but I am also thinking about just limiting it to one thing like food places.

Audience

People who are indecisive and blank out when thinking about what to do whether it be what restaurant to go to or where to.

Design and Style

Probably lots of blues and greens – bright and inviting look but also clean and modern. Minimalist but also like the idea of little windows that pop up below a search bar with recommendations.

Scope

Total of five pages as of now...

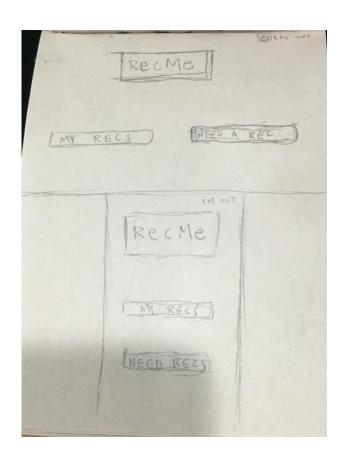

- Home page with options for other pages
- Page of recommendations on hand
 - Edit recommendation (on another page)
 - Delete Recommendation included in edit page
- Add a recommendation
- Get a recommendation
